

Abdullahi Mohamed

Full-Stack Developer / Backend Engineer

I enjoy building reliable, scalable, and maintainable systems that solve real problems. I'm passionate about backend engineering, clean architecture, and creating web applications that feel seamless from end to end. My approach combines technical precision with a strong sense of usability and performance.

Education

UNIVERSITI TUN HUSSEIN ONN MALAYSIA (UTHM)

Bachelor of
Information
Technology (Hons)
Expected Graduation: 2026

Experience

SOFTWARE DEVELOPER (FINAL YEAR PROJECT — SOLVEIT)

JAN 2024 – 2025 | UTHM
I developed Solvelt, a SaaS platform that allows university students to post and complete academic-related tasks. The system includes features such as authentication, task management, payment handling, and an admin dashboard. I also implemented real-time video calls and screen sharing using WebRTC, improving collaboration between users. This project helped me strengthen my skills in TypeScript, Next.js, and backend architecture.

INDEPENDENT WEB PROJECTS

2022 – PRESENT
I have built several full-stack projects, including a tutorial-sharing website where users can create accounts, upload content, and explore tutorials shared by others. Before learning Next.js, I worked with Node.js and Express, focusing on user authentication, file uploads, and database design. I also developed automation tools like ros2docker, a script for managing Docker containers easily.

Skills

Full-stack web
development (Next.js,
Node.js, React).
Backend design and
RESTful API
integration.
Database
management
(PostgreSQL, MySQL,
Drizzle, ORM, sqlc)
Version control (Git,
GitHub).
Docker, WebRTC,
WebSocket

ACHIEVEMENTS

Consistently achieved A to A+ grades in core programming and web development courses (C, C++, JavaScript, TypeScript). Self-taught in Next.js, TypeScript, and Go, applying them to real-world projects without formal instruction. Built and optimized custom PCs for development, gaming, and multimedia production. Completed over 45,000 lines of production-quality TypeScript and React code for academic and personal projects.
